On the choice of ....

to minimum blade numbers of 24 and 14, respectively. So long as the actual blade number does not drop below 80% of the theoretical minimum, the loss of efficiency is small (below 2%). In the experimental part of this work four turbine wheels with 24, 16, 12 and 8 blades, respectively, were tested in a set-up requiring a minimum of 13 blades. Air, compressed to  $3.2 \text{ kg/cm}^2$ , was heated in a combustion chamber by  $70^\circ\text{C}$  before admission to the experimental turbine. Power outputs between 250 and 330 hp were measured on a water brake for several pressures and temperatures. The efficiency of wheels with 12 blades and more remained almost constant at the design velocity ratio. A serious deterioration was observed with 8 blades, in accordance with analytical predictions. The efficiency loss due to a reduced number of blades was much smaller at small velocity ratios, because all wheels then suffer from flow separation. The flow outlet angles from the wheel, the measured degree of reaction of the flow and the mass flow as a function of the velocity ratio are given in graphs. The mass flow is hardly affected by the

Title : The Effect of Various Methods of Supporting  
Hop Plants upon Their Growth and Fertility.

Orig Pub : Postopy nauk roln., 1957, 4, No 4, 79-94

Abstract : The best results were achieved when hops were grown on a normal lattice, 7 meters high, and 4 stalks were attached from every plant. However, growing hops by this method requires large expenditures of manual labor, a fact, reflected in the cost of production. Experiments were carried out in growing hops on

Abs Jour : Ref Zhur-Biol., No 15, 1958, 68314

lattices of various heights, and the results indicate that lattices nine meters in height produced the largest yields and lattices of eight meters gave high average yields, whereas when the lattices were only seven meters high, yields were the lowest. However, if lattices were eight meters high, highest quality yields were produced. Because of their uneven ripening, plants grown on nine-meter lattices, gave many second-rate cones, thus lowering the value of the crop. The continuation of using eight-meter lattices can be recommended unreservedly; their use permits a significantly higher yield of hop cones which are obtained without the

Title : Technological Evaluation of Polish Hops Quality

Orig Pub : Przem. spozywozy, 1958, 12, No 6, 230-234

Abstract : Presented are analyses of hops obtained from various localities in the past 7 years. The evaluation was conducted on the basis 100% grading system. 50% was attributed to organoleptic measurements, 30% to mechanical and 20% to chemical properties. Comparison of the obtained data with the analyses of Czechoslovakian, German, Soviet, and Yugoslavian hops has established that Polish hops, on the basis of resins content occupies the first place; based on the content of soft resins it is superior

Title : Role of Interoceptors in Regulation of Blood Coagulation. Report 2. Role of Vasoreceptors in Carotid Sinus and Aortic Arch in Acceleration of Blood Coagulation in Acute Hemorrhage

Orig Pub : Byul. eksperim. biol. i med., 1957, 44, No 11, 48-52

Abstract : Observations were conducted on 29 rabbits (R). After unilateral ligation of the common carotid artery significant acceleration of blood coagulation (BC) was noted after 5 minutes in 6 of the 7 R and restoration to the original time in 30 minutes. In the 7th R unilateral ligation of the internal carotid artery was performed, and the carotid sinus of the corresponding side was denervated by means of resection of the sinus nerve in

Card 1/2

USSR/Human and Animal Physiology - Blood. Blood Coagulation.

Abs Jour : Ref Zhur Biol., No 3, 1959, 12648

order to remove irritation on the sino-carotid zone. Reflex acceleration of BC was not noted. In the second series of experiments in R the sinus nerves were cut bilaterally in group I before phlebotomy, and in R of group II the same incision was made on the neck without resection of the nerves. Group II exhibited significant acceleration of BC in comparison with group I. In experiments on dogs, 4 normals and 6 with denervated carotid sinus and resection of the vagus nerve, the former revealed a significant acceleration of BC for 20 - 30 minutes after phlebotomy (2% of body weight) in comparison with the latter. Consequently, in animals with denervated sino-carotid and aortic zones compensatory shifts in blood coagulation, which usually appeared after acute hemorrhage, were absent. -- E.R. Paley

Title : Interoceptive Regulation of Blood Coagulability. First Report. The Reflex Effect from the Chemoreceptors of the Carotid Sinus on Blood Coagulability.

Orig Pub : Byul. eksperim. biol., i meditainy, 1957, 44, No 7, 23-25

Abstract : In experiments upon dogs (24) 0.25 to 2 ml of 0.1-0.0001% solutions of acetylcholine or nicotine were introduced 1-3 times into a carotid sinus perfusion. Clotting time was determined 5, 10, 20, 30, 45, 60 and 90 minutes after stimulation of the chemoreceptors of the carotid sinus. Clotting time was steadily shortened, and between 20 and 30 minutes after stimulation was reduced by approximately half. This accelerated clotting lasted 1-1½ hours. The reflex change in clotting time in response to acetylcholine and nicotine was absent after denervation of the carotid sinus (transection

Title : Determination of Traces of Moisture in Gases

Orig Pub: Chem. prumysl, 1956, 6, No 10, 426-427

Abstract: Study of the conditions of determination of traces of moisture in gases by the method of Roth (Roth F., Brennsstoffchemie, 1941, 22, 77) with the use of Mg nitride, which is prepared by heating Mg in a current of N<sub>2</sub> at 700-800°, and is kept in reaction tubes (diameter 1 cm, length 4 cm, depth of Mg nitride layer 2 cm), drawn out at the tips to a diameter of 0.4 cm. The gas under study (1-1.5 liters) is passed through the tube at a rate of 90-110 ml/minute, and then (900-1000 ml) through an a washing bottle containing the absorber (NH<sub>3</sub>) solution (40 ml 0.001 N HCl). Thereafter there are added to the absorber solution 1 ml of

TITLE: Chronicle (Khronika)

PERIODICAL: Geodeziya i kartografiya, 1958, Nr 6, pp. 76-76 (USSR)

ABSTRACT: From April 21 - 22, 1958 the Conference on Labor Protection and Accident Prevention took place in Moscow. It was attended by: the chief-engineers of the aerial surveying institutes, accident prevention engineers, chairmen of the committees of worker's groups, factory and plant committees and regional organizations and of the trade unions in the enterprises and organizations of the Central Bureau of Surveying and Cartography at the Ministry for the Interior of the USSR (Glavnaya upravleniye geodezii i kartografii MVD SSSR). Besides there were present: leading collaborators of the Ministry of the Interior of the USSR (GUGK) (Ministerstvo vnutrennykh del SSSR) of the Central Committee of the Trade Union of Workers in Geological Prospecting (Profsoyuz rabochikh geologorazvedochnykh rabot), of the Technical Inspection of the Trade Union Executive Committees (Tekhnicheskaya inspeksiya sovetov profsoyuzov), of the Ministry of Health (ROZDZ) (Ministerstvo zdravookhraneniya RSFSR) and of the Trade Union

Central Committee (Profsoyuznyy aktiv). The following lectures were held: G. K. Zubakov, Deputy Director of the GUGK MVD SSSR: "On the Stage of Labor Protection and Accident Prevention in the Organizations and Institutions of the GUGK in 1956-1957 and the Measures Taken for Improving the Working Conditions and Decreasing Traumatic Accidents in Enterprises". The Director of the Department for Labor Protection at the TSK (Profsoyuza rabochikh geologobrazvedochnykh rabot), P. I. Yermakov spoke about "The Tasks of the Trade Union Organizations in the Enterprises and Cartographic Institutes of the GUGK for Improving Labor Protection, Accident Prevention and Industrial Sanitary Service and for Decreasing the Traumatic Accidents in the Enterprises and the Falling Ill of Workers". Other lectures were held by: the Chief Engineers of a number of aerial surveying enterprises, cartographic institutes and of the works of Aerial Surveying Instruments. - The purpose of the conference was to check the execution of the orders given by the XX-th Party Congress of the CP USSR concerning the further improvement of labor protection and accident prevention within the system of the Central Office of Surveying and Cartography. It was found that for these purposes great means are expended; at the

TITLE: Chronicle (Khronika)

PERIODICAL: Geodeziya i kartografiya, 1959, Nr 5, pp 75-76 (USSR)

ABSTRACT: From March 30 to April 2, 1959, a conference of the directors of the aerogeodetic enterprises and teams, of the managers of the cartographical establishments and of the NRKCh, as well as of the heads of the departments of the State Geodetic Supervising Authority of the MVD of the republics, of the UVD of the kray and oblast' was held in Moscow in the Glavnoye upravleniye geodezii i kartograffii MVD SSSR (Main Administration of Geodesy and Cartography of the Ministry of the Interior of the USSR). In the plenary meeting, Comrade A. N. Baranov, Manager of the GUGK, spoke on "Plan of the Topographic-geodetic and Cartographic Studies for 1959-1965." In the Geodetic Section, Comrade S. G. Sudakov, Deputy Manager of the GUGK, spoke on "On the Plan of the Topographic-geodetic Studies for 1959." In the Cartographic Section, A. N. Baranov, Manager of the GUGK, spoke on "Plan of the Cartographic Industry for 1959." In the section of the State Geodetic Supervising Authority of the MVD of the Republics,

Card 1/2

the UVOD of the kray and oblast', G. K. Zubakov, Deputy Manager of the GUGK MVD SSSR, spoke on "The Results of the Activities of the Departments of the State Geodetic Supervising Authority in 1958, and the Tasks in Future Work." The Conference approved the plan for the promotion of topographic-geodetic and cartographic studies in the years 1959-1965. The appearance of the following new cartographic publications is envisaged: physico-geographical world atlas, comprehensive atlas of the USSR, agricultural atlas of the USSR, comprehensive China atlas, school atlases, comprehensive atlases of the Union Republics and of individual oblast'. The Conference took decisions concerning measures for the improvement of the quality of topographic-geodetic studies.
